

## FOR IMMEDIATE RELEASE

TO: All News Media  
RE: February Pending Home Sales Index for Ohio  
FROM: Greg Hrabcak, OAR President, 614.454.1408  
Carl Horst, OAR Director of Publications/Media Relations, 614.225.6205  
DATE: March 30, 2015

The Ohio Association of REALTORS reports the number of single-family homes and condominiums put under agreement in February 2015 increased 13.7 percent from the level posted during the month a year ago.

The rate of purchase contract signings in February fell 6.4 percent from the market's January 2015 pace.

Ohio's February Pending Home Sales Index of 127.9, a forward-looking indicator based on contract signings, increased 13.7 percent from February 2014 (112.5). Activity in February decreased 6.4 percent from the pace of agreements reached in January (136.7).

"The Ohio housing marketplace is continuing to steadily exhibit signs of improvement, as our February pending sales index reached a best-ever level for the month," said OAR President Greg Hrabcak. "Additionally, the Ohio market has now tallied 10 consecutive months of year-over-year gains in agreements reached."

Compared to 2008, a historically healthy market that marked the end of five consecutive record years for existing home sales and the onset of the recession, January's Index score of 127.9 marks a 27.9 percent increase.

A pending sale or a sale "under agreement" is when the buyer and seller agree on terms of the sale of a home and have a signed purchase and sale agreement, but have yet to close and be recorded as such. Refer to the following report to view the pending home sales index and methods.

OAR, the largest professional trade association in the state with more than 28,000 members, is the only organization that compiles this state wide information from selected Multiple Listing Services each month. The tracking of "pending sales" provides reliable information about where the market is heading in coming months.

	2013	134.7	134.7
	2014	140.9	150.0
	2015 p	143.4	117.5

*\*The Pending Home Sales Index (PHSI) provides advanced information on future home-sales activity. Specifically, pending home sales become existing-home sales one-to-two months later so the PHSI can be used to predict actual home sales activity. The index is based on a sampling of Multiple Listing Service pending sales activity in Ohio, typically representing slightly above or slightly below 68 percent of transactions for existing-home sales. The index is seasonally adjusted to smooth out fluctuations that typically exist from month to month. To create the index, current pending home sales are compared to pending home sales in 2008. 2008 is used as a base year because it marks the end of five consecutive record years for existing home sales and the onset of the recession. 2008 home sales activity coincides with a level that is historically healthy. A PHSI score of 100 is equal to the average level of contract activity during 2008.*
